

HANSRAJ DEGHUN

(+91) 775-800-5274 ♦ Mumbai, Maharashtra

deghun@gmail.com ♦ <https://www.linkedin.com/in/hansraj-deghun/>

OBJECTIVE

Software Engineer with 4+ years of experience in backend development and distributed systems. Proven track record in designing scalable microservices, optimizing high-throughput systems, and mentoring teams to deliver reliable, business-driven solutions.

EDUCATION

Smt. Chandibai Himathmal Mansukhani College, Mumbai University

Bachelor of Computer Science; CGPA: 9.2/10

Mumbai

2017 - 2020

SKILLS

Programming Languages	Python, Go, JS.
Database	MySQL, MongoDB, Redis
Frameworks	FastAPI, Django, Sanic
Technologies	REST APIs, WebSockets, gRPC, Distributed System, Microservices, Database Design, Kafka, Docker, Kubernetes, GIT, Linux, Data Structures, Algorithms, CI/CD, Prometheus

EXPERIENCE

Software Development Engineer - 2

Fynd (Reliance Jio)

April 2025 - Present

Mumbai

- Leading end-to-end design, development, and ownership of the **Order Management System** for **Jio Commerce**, supporting business verticals including **JioMart, Tira, Swadesh, JioMart Partners, JioMart Digital, Netmeds, and JioGames**, with a focus on robust and scalable architecture managing **2 million** order creation per day.
- Architected scalable, highly available microservices handling complex order workflows, ensuring **zero downtime** during migrations involving **12 million orders**.
- Developed **asynchronous pipelines** to offload heavy, non-critical workloads, reducing API response times and improving overall system throughput.
- Actively mentored **5+ junior engineers**, led **code reviews**, and fostered best practices in software design, testing, and observability.
- Decoupled **OMS read/write** layers using **CQRS** and made core flows configurable, enhancing agility

Software Development Engineer - 1

Fynd (Reliance Jio)

May 2022 - March 2025

Mumbai

- Improved order processing latency by **33%**, reducing response times from **440ms** to **300ms** through backend optimization and caching strategies.
- Designed and implemented an end-to-end **bulk order processing and report generation pipeline** using Kafka, MongoDB, and Redis, leveraging range-bucketing + deterministic merges to process **5M+** orders annually and generate yearly reports **12x** faster (cutting turnaround from **1 hour** to under **5 minutes**).
- Deployed and configured observability tools including **Prometheus, Grafana, and Jaeger** to enable proactive monitoring and root cause analysis.
- Containerized microservices with **Docker**, orchestrated on **Kubernetes** clusters for seamless scaling and deployment.
- Successfully managed projects using **Jira**, ensuring efficient **agile** project management and timely delivery.

PROJECTS

URL Shortening Service. URL Shortening Service — Built a scalable short URL platform using Redis (INCR ID generation), MongoDB (mapping storage), Distributed Locking, and NGINX (load balancing). Added health checks for high availability. [Demo](#) — [GitHub](#)

ACHIEVEMENTS

- **Winner of Hacktimus (Internal Hackathon):** Built a B2B extension enabling sellers to fulfill orders for others, enhancing platform flexibility.
- **Innovator of the Year Award:** Optimized order processing for Jio's high-traffic **1 Rupee Sale** event.
- **4x Fynd Star Awards:** Recognized for outstanding contributions in Q2 2022, Q1 2023, Q2 2023, and Q1 2025.
